

At Capital Rx, we understand the need for more affordable specialty medications and we are committed to uncovering creative strategies to help drive down your specialty drug costs.

Your employer will be implementing Rx Cap for members using high-cost specialty medications. This plan enhancement connects you with programs to help lower your copays. You may be told you have a high out-of-pocket cost for these medications, but this will be lowered following enrollment in a copay assistance program.

How does Rx Cap Work?

Once your pharmacy[†] receives your prescription:

- Your pharmacy will contact you to verify if you have previously enrolled in a copay assistance program(s).
 - If you were previously in a copay assistance program, the pharmacy will use the same billing information provided to you from the manufacturer.
 - If this is your first time signing up, the pharmacy representative will work with you and your provider to complete your enrollment in the program.
 - If you are told by the pharmacy there is a large copay for your medication, the pharmacy may need to apply the billing information from the copay assistance program. Your out-of-pocket costs for your specialty medication could be as little as \$0[‡].

[†] Contact your plan administrator for information on your preferred pharmacy.

[‡] Out-of-pocket costs vary for each medication.
